

1. Setup Check: Pull & Run Maven Project

Goal: Ensure everyone has the project running on their local machine.

Steps:

Everyone pulls the repository:

```
git pull
```

```
cd LibraryManagementSystem
```

Run Maven install and test:

```
mvn clean install
```

```
mvn javafx:run
```

Success Criteria: All members confirm their local Maven setup is working

2. I created a new branch "library", make sure that the library branch is the branch that everyone branches off of to work on their features, etc.
